PUSPAN DAS

Technical Product Manager | Product Owner

Kolkata, India | +91-9038860682 | puspakdas124@gmail.com | github.com/puspanDas

PROFESSIONAL SUMMARY

Product manager with three years of experience owning backlogs and shipping features for enterprise and connected-vehicle software. I've worked across the full product lifecycle - writing requirements and user stories, running sprint ceremonies, coordinating UAT, and making the release go/no-go call - while partnering closely with engineering, UX, and compliance. Comfortable getting into the details myself: I write SQL to validate data and use AI-assisted development to prototype ideas quickly rather than waiting on engineering bandwidth.

CORE SKILLS

Product Strategy & Roadmapping, Agile/Scrum, Backlog Prioritization & Grooming, User Story Mapping, Requirements Analysis, Acceptance Criteria (Definition of Done), UAT & QA Coordination, Release Management (Go/No-Go), Stakeholder Management, Cross-Functional Leadership, UX/UI Collaboration, Data-Driven Decision Making

Technical: SQL (data validation & reporting), AI-assisted / vibe-coded development (Python, FastAPI), prompt engineering

Tools: Jira, IBM DOORS, Git

PROFESSIONAL EXPERIENCE

Associate Product Manager Oct 2022 - Jun 2025

Bosch Global Software Technologies | *Bengaluru, India*

Product Execution & Backlog Management - Stellantis Connected Vehicle Ecosystem

- Turned business goals for telematics and remote-start features into clear requirements and user stories, writing and grooming roughly 35-40 stories per quarter across 3 engineering teams.
- Owned and prioritized a product defect backlog of 150+ items in Jira, clearing critical blockers and cutting the open backlog by roughly 25% while keeping 2-week sprints on schedule.
- Set and enforced Definition of Done criteria for mobile-to-vehicle commands across 8+ releases, hitting 100% compliance with quality standards before every release.

Cross-Functional Leadership & Release Management - VW-Mopf Driving Software

- Acted as the technical liaison between regulatory compliance and development, translating ISO safety regulations into product requirements for a team of 6 engineers.
- Maintained the feature traceability matrix covering 50+ features, used to track release readiness and inform 10+ production go/no-go decisions.

User Experience & Global Deployment - Daimler Mercedes-Benz Infotainment

- Led UX evaluations of Android Auto and Apple CarPlay integrations, flagging 20+ friction points and driving interface changes that lifted user satisfaction scores by roughly 15%.
- Verified and localized infotainment features across 8 regions and 6 languages to support a smooth global rollout.

Data-Driven Product Operations

- Wrote SQL queries to pull and validate backend data directly, cutting QA turnaround time by roughly 20% and reducing developer dependency for data requests by about 30%.
- Directed AI coding tools through prompt engineering to build Python automation scripts for repetitive data-setup work, saving the team roughly 5-6 hours per sprint.

KEY PRODUCT PROJECTS

AI-Enhanced Agile Task Platform - Full-Stack Product Prototype 2025

GitHub: github.com/puspanDas/GIT-CHANGES

- Conceptualized and product-managed a task-management platform to test end-to-end AI product feasibility, directing AI-assisted ("vibe coding") development on a React 18 and Python/FastAPI stack.
- Designed an AI sprint-planning model that uses historical velocity data to automate task assignment and flag sprint bottlenecks.
- Built a context-aware RAG chatbot (LangChain, FAISS, Gemini) so contributors could query the codebase in natural language, cutting onboarding time for new team members.
- Ran rapid prototyping cycles to test engagement features, adding gamification (XP, leaderboards) and real-time collaboration.

EDUCATION

B.Tech in Electronics and Electrical Engineering 2018 - 2022

Kalinga Institute of Industrial Technology (KIIT) | *Bhubaneswar, India*

LANGUAGES

English - Professional Working Proficiency | Hindi - Native Proficiency
